

Dear Patient,

Thank you for choosing Canyon View Medical Group for your healthcare needs. We care about your health and we encourage wellness through preventive care. Our records indicate you are due for a cervical cancer screening. This screening is important in detecting cancer at an early stage and saves lives.

Pap smears are a pathology test that evaluates the cells of the cervix for cancer or for changes that can become cancerous. Since cervical cancer is primarily related to the human papillomavirus (HPV), guidelines for screening vary by age and health history. In general, it is recommended to start screening pap smears at age 21 and get them every 3 years until the age of 30 at which time you should get them every 5 years until age 65.

Please call our office to schedule your appointment.

Sincerely,
